Flood Protection Mini-Drain

Drains
water
leakage.

- **Drains water leakage to a waterproof area.**
- **Quick, easy installation.**

Flood Protection Mini-Drain with recess is a wastewater pipe mounted on the bottom panel of a base cabinet that creates a natural slope that diverts water away from hidden surfaces to a water-safe space. Install the mini-drain in the kitchen cabinet under a water heater, expansion tank etc. where water can leak.

In the event of a leak, the water flows down the mini-drain and is diverted with or without a drain hose (dishwasher) to Tollco Floor Protection Base Cabinet. The thickness of the bottom panel can be a maximum of 25 mm. Flood Protection Mini-Drain is patented.

Assembly: To install the mini-drain in a base cabinet, you need Tollco Base Cabinet Insert and Floor Protection Base Cabinet. Can also be mounted directly on a floor protector to divert water leakage. For making holes in cabinets, use hole saw/cutter T80 (80 mm), after hole punching, the hole measures $\text{Ø}84$ mm. For making holes in base cabinet inserts or floor protectors, use the hole-making tools provided. Select and cut out a hole measuring $\text{Ø}22$ mm. Hammer and nails are required for marking. Water level for levelling the cabinet.
