## Dishwasher bushing seal

Seals  
dishwasher  
hoses.

- **Suitable for all water-connected appliances.**
- **Standard with many kitchen manufacturers.**

Waterproof bushing for dishwasher hoses provides effective protection against water damage in sink cabinets. The bushing has a flexible rubber membrane that seals around the hoses. It thus fits all water-connected appliances.

The bushing is used together with Tollco Base Cabinet Insert to ensure that the sink cabinet is waterproof. There must be a sealed surface layer in or under the sink cabinet so that leaking water can be easily detected.

The surface layer must be sealed at penetrations according to the instructions.

The product is made in Sweden and patented and has been adopted as standard by several of Sweden's largest kitchen manufacturers. The product is tested and approved in accordance with RISE report 9P07761. The product is accepted in Byggvarubedömningen and is of course approved by Säker Vatten.
