

Tollco Sealing range

Sealing tape set

Seals
pipe
penetra-
tions.

- **Perfect for waterproof pipe penetrations.**
- **Also seals joints, screw holes and cracks.**

Tollco offers formable, elastic seals made of polyisobutylene as a complement to our cabinet and appliance protection. They stick to all clean and dry surfaces.

The sealing tape kit is a set of three different types of seals and a hole-making tool:

- The white sealing tape is single-sided and perfect for sealing pipe penetrations around pipes and over joints and cracks.
- The black sealing tape is double-sided and used to seal joints between two materials, such as the cabinet bottoms and plastic floor protectors.
- The grey sealant is formable and easily seals screw holes. It can be rolled to seal around pipes and in cracks.
- The blue hole-making tool is used to make holes in the base. Unscrew the spike, select the hole size and use a utility knife to cut the hole.
