

Tollco Water Leakage Switch

WaterFuse Apartment

Protect
homes
against water
damage.

- **Creates security whether you are at home or travelling.**
- **Minimise the risk of water damage.**
- **Water detectors detect, shut off and warn when a leak is detected.**

THREE MAIN FEATURES:

- Detects leaks, emits an alarm and shuts off the water.
- Motorised ball valves for operational safety.
- Protects you and your neighbours.

IT WORKS VERY SMOOTHLY

Press OFF on the remote unit in the hall and turn off the water when you leave home. If the dishwasher is on, you can select delayed shutdown to let it run. When you get home, turn on the water by pressing the ON button on the remote.

Detectors are located under the dishwasher and washing machine and other sensitive places. If there is the slightest leak, a signal is sent to the central unit and the main water line is turned off.

SECURE BENEFITS

Water damage in apartments often causes major costs and discomfort. The costs are related to decontamination, restoration and possibly evacuation accommodations. The damage usually affects one or more underlying apartments that must also be cleaned up. A single case of water damage can therefore cause a need for several evacuation apartments. Decontamination and repairs can also take place over several months.

After decontamination, mould may still remain in the dried material, but now as dead spores. These can then be spread to all apartments via the ventilation system and create allergies and other ill health effects amongst the residents. This leakage circuit breaker minimises the risk of one or more apartments being damaged by water.

RECOMMENDED BY INSURANCE COMPANIES

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.

Product	RSK	Item no.
Apartment	561 98 68	VFB200-DN15
Apartment + Remote Unit	561 98 72	VFB210-DN15
