

Tollco Water Leakage Switch Wireless Detector

- **Can have up to 16 wireless water detectors.**
- **Automatic water shut-off in case of leakage.**
- **Minimises water damage in, for example, apartments, cottages, coffee and water machines.**

**Creates
security
around the
clock!**

THREE MAIN FEATURES:

- Emits alarm in case of leakage.
- Shuts off the water in case of leakage.
- Wireless water detectors.

IT WORKS VERY SMOOTHLY

1. Plug the PlugIn 2.4 Ghz into the electrical outlet.
2. Install the valve(s).
3. Place water sensors and sensor tape.

The system is then up and running and you can feel safe.

SECURE BENEFITS

Tollco Water Leakage Switch Wireless Detector reduces the risk of water damage. The wireless sensor is placed where leakage is to be monitored and constantly detects whether water is getting on it. If it gets water on it, the water is immediately shut off and an alarm signal informs you that a water leak has occurred. The automatic alarm signal sounds from the central unit and the water sensor.

In sink cabinets, we often have a high number of connections to, e.g. mixers, dishwashers and other water-connected equipment. At the same time, we have drain pipes from the sink and dishwasher with a number of joints. This is one of the reasons why more than 30 % of all water damage occurs in the kitchen. WaterFuse Leakage Circuit Breaker is a simple and safe system that reduces the risk of water damage in houses, apartments, offices, public environments and individual equipment.

RECOMMENDED BY INSURANCE COMPANIES

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.
