

Tollco Wateralarms

9 volt, built-in sensor

- **Sounds an alarm when water leakage occurs.**
- **Easy to install.**
- **10-year battery life.**

Sounds an alarm with a signal. Battery time 10 years of age.

This flexible water alarm can easily be placed in risky areas to quickly detect water leakage. You can place multiple alarms in the building, such as in cabinets, pipe shafts, inspection hatches and other hidden surfaces with water connections where water leakage commonly occurs.

If a leak occurs, a moisture sensor sucks up the water and activates the high alarm signal of about 85 dB. Because the 9-volt battery is only consumed when the alarm is activated, the service life is up to ten years before it has to be replaced.

The battery can sound at full volume for at least four days and at a decreasing volume for at least ten days. A 10-year-old battery is capable of sounding an alarm for at least 48 hours and at a decreasing volume for at least another five days. There is a feature to test the status of the battery if you are uncertain of it.

The water alarm is a perfect complement to Tollco's floor and appliance protection.
