Waterproof bottom in sink cabinets

Tollco waterproof insert is designed to protect the sink cabinet from water damage by leading leaking water to the floor protection and further onto the floor to make it visible.

It also protects against wear and creates a surface that is easy to clean.

*Economic
and climate-smart*

Sealing set with sockets

- Sealing set for water pipes, drain pipes and cabling.
- Pipe transit seal for dishwasher hose and cables.
- Included sockets fits pipe dimension 10 mm to 80 mm.

Kitchen w

Water damage has a major ne
emissions increase as damage
the risk and extent of water d
to a sustainable future.

Water fault switch

- Detects water using sensors placed in the driptrays.
- The valves are mounted on incoming water. If the sensors are exposed to water the water flow to both hot and cold water is immediately shut off.
- The unit sounds in the event of an alarm and is connected to the existing 220V wall socket. The dishwasher's 220V socket is connected to the unit.

Drip tray under dishwasher

- Designed to collect leakage from machine hose connections.
- Tollco drip tray has an openable front so that the dishwasher easily can be rolled in and out.
- The protection make hidden leakage visible by leading leaking water to the front opening of the driptray onto the floor.

Drip tray under fridge- and freezer

- Designed to collect condensation water and leakage from water pipes.
- Tollco drip tray has an openable front so that the fridge/freezer easily can be rolled in and out.
- Abnormal leakage of condensation water or a hidden leakage from waterpipes will be made visible by leading leaking water to the front opening of the driptray onto the floor.

without water damage

negative impact on the environment. Water consumption and CO2
ed material need to be torn out, removed and replaced. By minimizing
damage, we contribute to reduced resource consumption. It contributes

Water damage is troublesome for everyone affected

Of all damages in Swedish homes, water damage is the most common and approximately 100,000 homes are affected annually. Mold in moisture-damaged building materials leads to allergies and asthma if the damage is not detected and remedied in time. The cost is enormous, as is the negative impact on our environment.

By preventing water damage, unnecessary costs can be avoided and at the same time contribute to a better climate. It is good for our health, the climate as well as the economy.

For over 25 years, we have helped our customers protect themselves from water damage. With Tollco wet-zone system, you can always feel safe.

Do you have any questions or are interested to hear more about how to best protect yourself and your property from water damage?
