

Tollco Accessories for Wet Zone

Rim Clamp for Floortrays

- **Join two floor protectors together.**
- **Diverts water to floor drain, flood protection or out onto the floor.**

**Connects
wet zone
together.**

The rim clamp joins floor protectors in the wet zone and diverts water leakage through the edge of two adjacent floor protectors. The water from the leak is then transported down to the flood protection and drain/flood protection. If there is no floor drain, the leak can be diverted out to the floor and made visible.

By combining these products, you have created a wet zone under your kitchen equipment. A simple safe installation that can reduce the risk of water damage in the kitchen.
