

Tollco Sealing range

Seal set with pipe collar

For
water-
proof sink
cabinets.

- **Complete sealing kit for pipes.**
- **Reduce the risk of water damage.**

Tollco's complete sealing kit gives you a waterproof sink cabinet. It is a simple and safe complete solution that reduces the risk of water damage in the kitchen. The sealing kit includes:

- **Tollco sleeve couplings** designed with a mechanically lockable slot. This allows you to customize the sleeve coupling for several different pipe dimensions and retrofit it to an established pipe connection without loosening the pipe. The installation can be easily inspected by opening or lifting the nozzle to check the seal.
- **Tollco seals** in polyisobutylene are waterproof and malleable for placement around the pipe and bushing. To protect the seal, install the sleeve coupling around the pipe and lower over the seal.
- **Tollco Bushing for dishwasher hoses** This is a waterproof bushing with butyl seal for dishwasher hoses, pipes and cables in the sink cabinet. The bushing has a flexible membrane that seals around the hoses and is therefore suitable for all water-connected appliances.

The sealing kit is used together with Tollco Base Cabinet Insert. Together, they create a sink cabinet that is both waterproof and easy to clean.
