

# Tollco Water Leakage Switch

## WaterFuse Cabbin

- **Easy shutdown when you leave the cabbin.**
- **Detects, shuts off and warns in case of leakage.**

**Prevents  
water  
damage in  
the cabbin.**

### **THREE MAIN FEATURES:**

- Shuts off the water when the power comes back on after a power failure.
- Shuts off the water when there is a risk of freezing.
- Detects, shuts off and warns in case of leakage.

### **IT WORKS VERY SMOOTHLY**

Press the remote unit on the front door when leaving the cabbin to turn off the water. You can select delayed shutdown if, for example, the dishwasher is running. When you return, press ON and the water will turn on again. Place detectors under dishwashers and washing machines and other risk areas. If there is the slightest leak, a signal is sent to the central unit and the water is turned off immediately. The detectors also contain a temperature sensor that shuts off the water if there is a risk of freezing damage.

### **SECURE BENEFITS**

This water leakage switch minimises the risk of water damage to your cabbin. The system detects the slightest water leak, shuts off the main water line and emits an alarm. It creates security both when you are in the cabbin and when you are not there.

### **RECOMMENDED BY INSURANCE COMPANIES**

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.
