

# Tollco Water Leakage Switch

## WaterFuse Equipment

Protects  
the office  
from water  
damage.

- **The alarm or building controller can turn the water off and on.**
- **Sensor that detects water leakage and shuts off immediately.**
- **Timer so that the water is shut off automatically on evenings and weekends.**

### THREE MAIN FEATURES:

- Timer for higher security.
- Motorised ball valves for operational safety.
- Detects, shuts off and warns in case of leakage.

### IT WORKS VERY SMOOTHLY

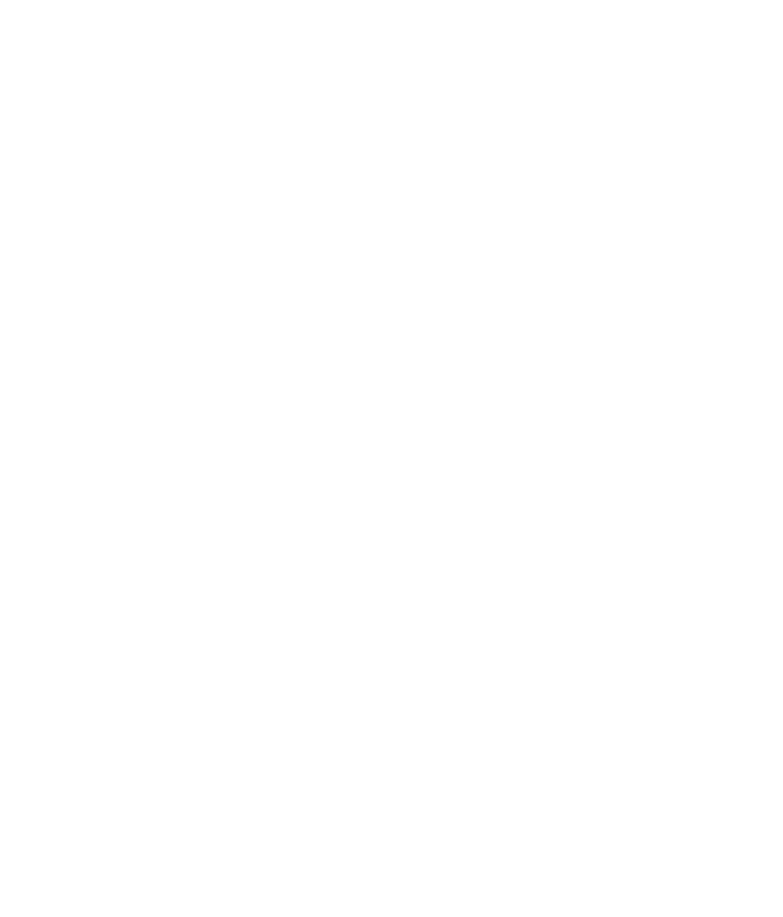

Tollco Leakage Circuit Breaker WaterFuse Equipment protects the office from water damage. The motorised valve is mounted before the hose to the equipment to be monitored. A water sensor is placed under the equipment and it shuts off the water automatically in the event of water leakage. By pressing ON on the control unit, a timer starts that automatically shuts off the water 12 hours later. If you want the water to be on constantly, there is a function like that that can also be set during installation. You then manually turn the water on and off and the water sensor always monitors the water. The leakage circuit breaker can also be controlled by an alarm or building control system.

### SECURE BENEFITS

WaterFuse Water Leakage Switch is a simple and safe system that reduces the risk of water damage in houses, apartments, offices, public environments and individual equipment.

### RECOMMENDED BY INSURANCE COMPANIES

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.
