

Tollco Water Leakage Switch

WaterFuse Kitchen

- **Detects, shuts off and emits an alarm for water leakage under the sink cabinet and dishwasher.**

Reduces the risk of being impacted by water damage.

THREE MAIN FEATURES:

- You can simply turn off the water when you leave home.
- Shut-off for both cold and hot water.
- Motorised ball valves for operational safety.

IT WORKS VERY SMOOTHLY

Tollco Water Leakage Switch WaterFuse Kitchen protects kitchen from water damage. The motorised valves are mounted on hot and cold water in the kitchen cabinet. The water sensors are placed on the waterproof surfaces that have to be there and are connected directly to the central unit. The system now protects against leaks from the pressurised system and leaks from joints to drain pipes and drain hoses from the dishwasher.

SECURE BENEFITS

Water damage often causes major costs and inconvenience. The costs are related to decontamination, restoration and possibly evacuation accommodations. The damage usually affects one or more underlying apartments that must also be cleaned up. A single case of water damage can therefore cause a need for several evacuation apartments. Decontamination and repairs can also take place over several months.

RECOMMENDED BY INSURANCE COMPANIES

Water damage entails high costs for insurance companies. Therefore, many support the installation of our water switches/water circuit breakers. Check with your insurance company about what requirements they have and how you can get a lower premium.
