

Tollco Wateralarms

230 volt, external sensors

Installed
in normal
wall
outlets.

- **Three sensors sound an alarm as soon as a leak occurs.**
- **Can be placed under water-connected equipment and in hidden areas.**
- **Can easily be upgraded to leakage circuit breaker.**

With the Water Alarm, you detect unfortunate surprises in the form of leakage and water damage. Place the water sensors under dishwashers, sink cabinets, refrigerators, freezers, aquariums, radiators or culverts, pipe shafts and slots.

Once the water alarm detects water, the device sounds an alarm with a clear alarm signal. This allows the leak to be quickly identified and remedied immediately. The water sensors are never consumed, they can be dried and reused the same way again.

Can easily be upgraded to leakage circuit breaker by adding motorised valves. See the products PlugIn and PlugIn 2.4 GHz.
