

# Tollco Wateralarms

## 9 volt, external sensors

Cover  
large  
areas.

- **Installed in hidden areas.**
- **Prevents costly water damage.**
- **The alarm detects leaks in three different places.**
- **Sensors activate the alarm as soon as a leak occurs.**

This water alarm has three sensors that quickly detect leaks and sound an alarm before water damage occurs. The alarm is battery operated and is placed in hidden areas and in cabinets where there is a risk of leakage, such as under the sink and dishwasher, in pipe shafts etc. If a leak occurs, an alarm sounds and you quickly detect the leak. This prevents moisture from climbing up the walls or getting into the floor before the leak is detected.

The water alarm has three water sensors with 1.5-metre cables to cover multiple large surfaces. If a leak occurs, the sensors suck up the water and activate a high alarm signal. There is a feature to test the battery power if you are uncertain of it.

Battery life is approximately two years. The unit beeps when it is time to replace the batteries. The water alarm is a perfect complement to Tollco's floor and appliance protection.
