

# Tollco Water Alarm

## 3V, 3 sensors

Small  
and  
versatile!

- **Triggers an alarm if water leakage occurs.**
- **Easy to install.**
- **Two-year battery life.**

Tollco Water Alarm 3V internal sensor reduces the risk of incurring water damage. Place the water alarm under the area to be monitored and it detects if it gets water on it. If it gets water on it, it triggers an audio and visual alarm, and if it is connected to a central unit, it also sends an alarm there.

The water alarm continuously monitors with its sensors and reacts immediately if it detects water. Any accompanying external water sensors can be easily connected to the water alarm via two connectors on either side of the unit. The sensors are designed to quickly detect water and send a signal to the unit after just a few drops.

The water alarm is powered by 2 AA batteries. Expected battery life is 2 years. Check the function every two years by pressing TEST, a beep should sound, and the unit should flash red with pulsing beeps after a few seconds.

**The water alarm is a perfect complement to Tollco's floor and appliance protection.**
