

Tollco Seals

Flexible Sealing Set

- **Fittings for pipes and hoses.**
- **Flexible and stretchable.**
- **Waterproof and neat installation.**

**Flexible
and fast
installation**

Tollco Flexible Seals are designed for installation in sink cabinets. These seals provide a waterproof fitting for pipes/hoses and are used with the Tollco sink liner insert to ensure the cabinet is waterproofed. There should be a waterproofed surface in or under the sink cabinet so that leaking water can be easily detected. This surface should be sealed with fittings according to instructions.

The flexible seals protect and prevent water damage to the sink cabinet and kitchen floor and are especially useful when installing a new kitchen, as the seals can be applied over pipes from above.

The flexible seals have a rigid PP frame with an elastic, stretchable TPE membrane with a hole for the pipe fitting, suitable for both pipes and dishwasher hoses.

The new Flexible Seals for drain pipes/supply pipes come in three sizes with outer dimensions of Ø8–18 mm, Ø17–27 mm, and Ø45–88 mm.

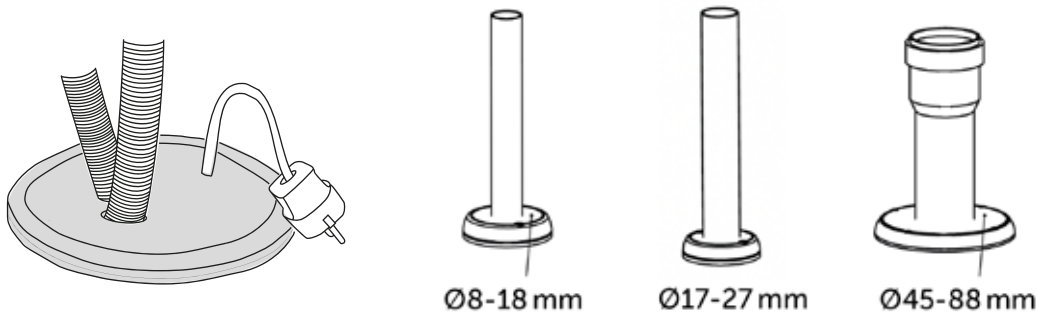

The fitting for dishwasher hoses is compatible with all water-connected appliances.

Tollco Flexible Seals have been tested by RISE (Research Institutes of Sweden) and meet moisture and watertightness requirements.

INSTALLATION

Suitable for use in kitchen sink cabinets. Place and install the sink liner at the bottom of the cabinet. Position the Flex Seal over the pipe or hose to be sealed from above, then secure it quickly and easily with screws (included in the package). No additional sealants are needed. When correctly installed, the products are watertight. Installation instructions and a drilling template are included in the package.

The flexible seals are Swedish-made, patented, and have become standard with several major kitchen manufacturers in Sweden.
