

Tollco Water Alarm

- Alerts when a water leak occurs
- Easy to install
- Battery with a two-year lifespan

The Tollco water alarm reduces the risk of water damage. The alarm is placed under the area to be monitored and continuously detects if it comes into contact with water.

If water is detected, it triggers both an audible and visual alarm. If connected to a central unit, that unit will also be alerted.

The water alarm continuously monitors using its sensors and reacts immediately when water is detected. Any included external water sensors can be easily connected to the alarm via two connectors on either side of the unit. These sensors are designed to detect water quickly—just a few drops are enough to send a signal to the unit.

The water alarm is powered by two AA batteries, with an expected battery life of up to two years before replacement is needed. Functionality should be checked at least every six months by pressing the TEST button. A beep should sound, and after a few seconds, the unit will flash red along with a pulsing beep signal.

The water alarm is a perfect complement to Tollco's floor and appliance protection systems.
